

Photocontrol Sensor Calibration In A Flash

All You Need is a Smartphone

Acuity Controls photocontrol sensors are now even easier to calibrate with the new Visible Light Programming (VLP) sensor option¹ and your smartphone! Using VLP enabled sensors with the new Acuity VLP App aids in complying with ASHARE and other local code requirements for photocontrol sensor programming.²

The Acuity VLP App communicates with the sensor in 3 easy steps to program the set-point via the flash from your cell phone camera – Set, Point and Send.

- Aids in meeting code requirements for photocontrol sensor programming
- Available in select Sensor Switch[®] and nLight[®] photocontrol sensors
- Free Smartphone App for iOS and Android³ operating systems
- Ladder free programming

Acuity VLP App

- Wide range of set-point values
- Automatic option allows the sensor to select the appropriate photocontrol set-point
- Visual feedback from fixture to confirm commands
- Lock screen protects the set-point from being inadvertently modified

1. Please refer to Agile for product availability information.
2. The user should read the applicable code for more complete and detailed code requirements and exceptions.
3. Available in December.
