

ATRIUS™

ATRIUS™ ASSETS

TAKE ACTION ON MOVEMENT

Atrius Assets is a cloud-based software service that includes APIs, administration, and visualization interfaces to deliver real-time indoor asset tracking and management, by leveraging the Atrius™-Ready Sensory Network and Bluetooth® Low Energy technology communication.

Enhance business performance with Atrius Assets, to provide accurate location, pathing and alert monitoring of items, equipment and personnel, directly from a web browser or via integration with business applications. Gain thorough understanding of assets' real-time location and movement trends, to optimize workflows, enhance on-demand and dispatch services, redesign space layouts, implement safety or theft prevention initiatives, and improve equipment utilization and maintenance.

FEATURES AND BENEFITS

Precise Indoor Tracking – Locate assets, equipment and personnel, with 2-meter or better accuracy, to reliably optimize workflows and enhance responsive services, with:

- Precise X,Y location
- Search capability
- Real-time pathing
- Utilization trending and analysis
- Geo-fencing and zone monitoring
- Status and health indication (telemetry data)

Deployed from Your Connected Building – Atrius-Ready luminaires, featuring embedded Bluetooth Low Energy technology radios, are your all-in-one communication and network deployment solution. The luminaires provide the electrical power to the embedded radios, eliminating deployment and maintenance costs.

Rugged Asset Tags – Choose from a selection of standard form and fit factors, available from our pre-approved vendors, with options for customization. All approved asset tags feature Bluetooth Low Energy technology beacons, tested for battery longevity (up to 2 years at typical 3-second beaconing interval) and delivered within a durable IP-67 rated enclosure.

ATRIUS ASSETS

Easy Configuration and Management – Simplify configuration of your applications with Atrius Admin, web-based administration tool: set beacon attributes, categorize and group assets, define zones, manage multi-site requirements and user roles, maintain venue layouts and more.

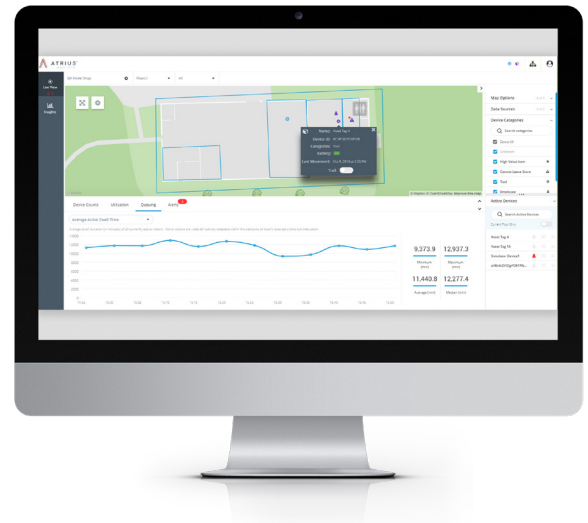

Rich Visual Analysis – Overlay 60-minutes of live data onto your venue layout, to locate assets, analyze movement paths and monitor asset telemetry information, via Atrius LiveView, web-based interface.

Actionable Alert Management – Create real-time alerts based on dwell time, count, health metrics and more. Define alert severity and desired resolution actions. Facilitate actionable management of alerts through web-based visualization, text and email notifications.

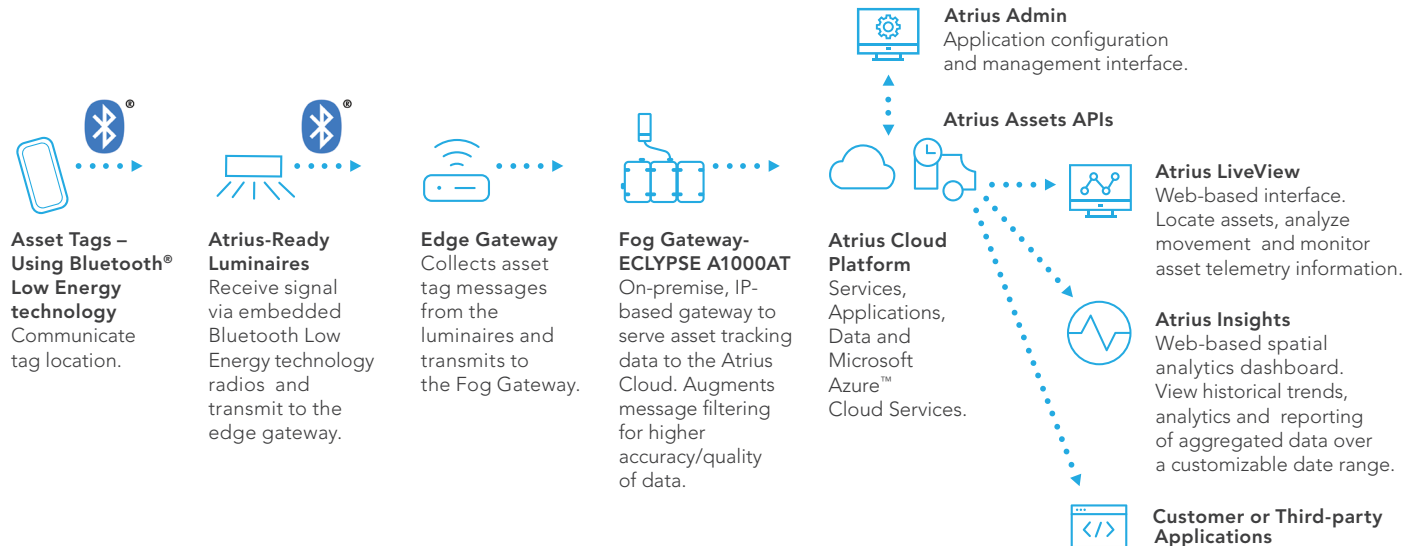

Custom Development – Integrate and use asset location, movement and telemetry data within your enterprise software or third-party applications, leveraging Atrius Assets software service APIs.

More with Atrius Insights – Gain thorough understanding of asset utilization and trends, and view analysis of aggregated data over customizable date ranges with Atrius Insights, web-based spatial analytics dashboard.

Unlock More with Atrius Location-based Services – Utilize your connected building to seamlessly unlock Atrius Navigator, indoor positioning services. Deepen spatial and behavioral analysis by aggregating information from Atrius Assets and Atrius Navigator within Atrius Insights, web-based spatial analytics dashboard; achieving a level of business responsiveness that redefines visitor experiences.

HOW IT WORKS

About Atrius IoT Solutions

The leader in Internet of Things applications for your building, Atrius IoT solutions enable digital experiences in your space by effortlessly unlocking rich services for developers, businesses and customers.
