4. Click on “Agents”
Click on “ROAM”
You can now issue ON/OFF/DIM commands by clicking the appropriate icons.
FAQ’s

• What Browsers are supported?
  Although most all of the popular browsers are supported you may find using
  Google Chrome® will yield the best results.

• Why are lights turning on/off when I’m not issuing a command?
  Please be aware that in the current state of the Demo site you may encounter
  multiple users on the site. If this becomes an issue we will look at preventative
  measures in the near future.

• Why can’t I see the live camera feed?
  Please ensure you have the current version of Java & Quicktime© installed on
  your computer.

• Why can’t I demonstrate full-range dimming?
  Although the fixtures & ROAM are capable of full-range dimming the camera is
  not capable of detecting minute changes in the light levels. Therefore, we chose
  to preset the dimming level to 5%.
Thank you.
